## **ECONOMIC SECURITY OF THE REGIONS AND ITS ROLE IN THE ENSURING OF NATIONAL SECURITY**

The article aims to determine the level of impact of economic security of the region and the state as a whole at achieving the economic growth.

In research process both general and specific methods were used, namely, analysis and synthesis method; method of scientific abstraction; method of induction and the systems analysis method – in justification of the state strategy of economic security of Ukraine.

The results of the research determine relationships between economic and social security and economic growth. One of the main places in providing national security plays an economic and social security of the region.

It was determined that socialization of Economy of the region focused on the following objectives: analysis of the economic and social situation in the region; development and implementation of reform directions of regional development; control over the implementation of activities all for reform. Formation of an effective social economy is affected by trends and conditions on the level of social economy. The system of organizational, economic and legislative measures of prevention socio-economic challenges determines a mechanism of ensuring of social security.

At this stage, a state strategy economic security of Ukraine should be oriented first of all on: support of adequate standard of living; socio-political public safety; preservation of the constitutional order; formation of a stable system

of national values and interests. Identification of local problems most effectively carried out by local authorities as the closest to the population.

The article defines the directions of increasing of economic security in regions (for example the Kharkiv region). Ukraine's transition to the new socio-economic relations, as well as its entry in the World economic system demands from country's degree of openness of the economy. Changes in geopolitical conditions require an understanding approaches and development of the national security concept, within the overall concept - the main provisions of economic security of Ukraine.

In order Ukraine and its regions can start climbing the stairs of the world rankings to the group of developed countries, and the population feels a significant growth in life there is a need to accelerate the adoption and carry out practical implementation of the program of economic reforms. Among these reforms we regard an increasing of social orientation of industrial development of the region and solving social and economic problems associated with an increasing in living standards. It is also important to focus on resource saving used in the production of technologies in all industries, on increasing of balancing of enterprises development in various industries at the regional level by forming intersectional territorial complexes. It is necessary to accelerate the development of industries that are able to increase the export potential of the region, to activate the search of effective directions of conversion and expansion of industrial specialization considering trends of the international labor division, to develop a small business in industrial sector, reorientation on production development of innovative, industrial products and services.

Comprehensive approach to determining the effect of the economic security of the region and the state as a whole to achieve economic growth was used.

The practical significance of the results of the study is that the results of the study can be used for justification of state economic security strategy of Kharkiv region and other regions of Ukraine.
